OUTPUT:

The screenshot shows the WOKWI IDE interface. On the left, the 'sketch.ino' file is open, displaying C++ code for an ESP32 connected to a DHT22 sensor. The code includes libraries for WiFi, MQTT, and DHT, and sets up an MQTT client to publish sensor data. On the right, the 'Simulation' window shows a 3D model of the ESP32 board with a DHT22 sensor connected. Below the simulation, the console output shows the device sending JSON payloads: {"temperature":51.40,"humidity":86.00}.

The screenshot shows the IBM Watson IoT Platform console. The top navigation bar includes 'Browse', 'Action', 'Device Types', and 'Interfaces'. A table lists devices, with one device (ID 12345) highlighted. Below the table, the 'Recent Events' tab is selected, showing a list of events received from the device. The events are JSON payloads containing temperature and humidity data.
