Solution Requirements Functional & Non-functional

Date	08 November 2022
Team ID	PNT2022TMID36645
Project Name	Project – Smart farmer-IoT enabled Smart farming application.
Maximum Marks	4 Marks

Functional Requirements:

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Registration	Registration through Gmail
FR-2	User Confirmation	Configuration via email/OTP
FR-3	Login to system	Check credentials Check Role of Access
FR-4	Manage modules	Manage system Admins Manage Role of User Manage User permission
FR-5	Check details	Temperature details Humidity details
FR-6	Log out	Exit

Non-functional Requirements:

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	High productivityLess time consumptionEasy to learn
NFR-2	Security	Sensitive and private data must be protected from their production untill the decision making and storage stages
NFR-3	Reliability	Accuracy of data and hence it is Reliable.
NFR-4	Performance	The idea of implementing the integrated sensors with sensing soil and environmental or ambient parameters in farming will be more e cient for overall monitoring
NFR-5	Availability	Automatic adjustment of farming equipment made possible by linking information like crops, weather and equipment to auto adjust temperature, humidity, watering crops, etc.
NFR-6	Scalability	Scalability is a major concern for IoT platforms. It has shown that different architectural choices of IoT platforms a etc system scalability and that automatic real time decision making is feasible in an environment composed of dozens of thousands.
